Amsterdam, The Netherlands • neemamanav@gmail.com • +31 0616626860 • [LinkedIn](#)

Education

University of Amsterdam / Vrije University Amsterdam

Master of Science (M.Sc.) in Computer Science with a specialization in big data engineering.
Teaching Assistant: Secure Machine Learning, Service-Oriented Design, Web Data Engineering

Amsterdam, The Netherlands

Expected June 2026

Narsee Monjee Institute of Management Studies (NMIMS) University

Bachelor of technology (B.Tech.) with specialization in Information Technology

Mumbai, India

July 2017 – April 2021

Experience

Bridgestone Mobility Solutions

Amsterdam, The Netherlands || April 2025 – Feb' 2026

Data Science Intern

- Engineered batch and real-time streaming data pipelines on Azure Databricks, processing telematics events via Apache Kafka to deliver KPIs and predictions to fleet analytics dashboards.
- Operationalized end-to-end ML workflows, including ETL pipelines, model deployment, and monitoring, ensuring data quality, versioning, and reliable integration with downstream analytics systems.
- Conducted custom EDA for client-facing deliverables and implemented data validation and monitoring mechanisms to ensure data quality and pipeline reliability in production environments.

ZS Associates

Pune, India || Dec' 2023 – July 2024

Associate Consultant – Data Analytics and Engineering

- Collaborated on-site in California with cross-functional stakeholders to scope and architect scalable data solutions for multiple enterprise use cases, mapping data flows and translating business logic into engineering estimates.
- Designed and implemented a fine-grained data access control framework for sensitive clinical and workforce datasets, enforcing row-level security in Snowflake and integrating with downstream Tableau dashboards in compliance with data governance standards.
- Led a team of data engineers to optimize ETL pipelines processing workforce data, handling high-priority production incidents and resolving scalability bottlenecks to reduce operational overhead.

Associate – Data Analytics and Engineering

Pune, India || June 2021 – December 2023

- Spearheaded migration of a legacy financial data warehouse to Databricks and Snowflake: performed SQL-driven discovery and business logic mapping across the existing architecture, then re-implemented all transformation logic in SQL and PySpark.
- Built a Databricks-native DAG orchestration framework that replaced a cross-platform Airflow setup, consolidating pipeline execution and CI/CD configuration onto a single platform; framework was organically adopted by multiple teams across different client engagements beyond its original scope.
- Designed and implemented data transformations and structured data models for financial datasets, enabling integration into relational and semantic systems while supporting downstream on Tableau.
- Engineered data ingestion pipelines into knowledge graphs; exposed data via SPARQL and GraphQL endpoints.

Projects and Research Contributions

- Performed analysis on musical preferences of Twitter users to identify behavioral patterns and mental health signals. Performed EDA, built data ingestion pipeline, developed ML models (NN, Random Forest) and visualisation.
- Conducted a literature review of GDPR-compliant anonymization techniques including differential privacy and synthetic data for ML pipelines.

Skills & Certifications

- SQL (advanced — window functions, CTEs, query optimisation), Python, PySpark, Pandas, GraphQL, SPARQL
- Certified SAFe 5 Practitioner, Scaled Agile Inc. – SCRUM, Agile methodology
- Azure Databricks (Delta Lake, compute management), Snowflake, AWS S3, EC2, SageMaker & Neptune, Stardog, GraphiQL
- Experienced with CI/CD tools and code management platforms like Github, Azure DevOps and BitBucket
- Data pipelines: Apache Kafka (streaming), DAG orchestration (Databricks; Airflow), Analytics & BI: Tableau, EDA, dimensional modelling, self-serve analytics enablement
